- 2001 *Regents Fellowship*, University of Michigan.
- 2000 *Bernard Buckman Fellowship*, School of Oriental and African Studies.
- 1999 *Genesee Scholarship*, University of Rochester.
- 1999 - 2003 *Studienstiftung des deutschen Volkes* (German National Academic Foundation).

WORK IN PROGRESS

When the Internet was introduced to China in 1994 soon this new communication technology posed a challenging puzzle to the Chinese Communist Party: how can the state support the development of interactive digital technology that required a certain degree of openness while at the same time also inhibiting its potentially destabilizing effects? Original data collected during the Hu Jintao era in 2008 and Xi Jinping era in 2018 reveal that the state manages digital platforms based on a combination of opening space for citizen participation required for technological development, while also developing technological and institutional infrastructure to manage and control participation in these participatory spaces, when necessary. The state thus can reap the benefits of digital transformation, while also keeping its destabilizing effects under control. Even under the more tightly controlled and personalized leadership of Xi Jinping Chinese citizens overall perceive these developments as positive, emphasizing the power of digital technology for greater openness and convenience. This will be the first book that focuses on the user perspective of digital governance in China, drawing on nationally representative data on Chinese Internet users.
